

SYSTEM REQUIREMENTS SPECIFICATION (SRS)

Project Name: CLICK COMPUTER AND ACCESSORIES

Document Type: System Requirements Specification

Version: 1.0

Date: 24 August 2026

1. Introduction

1.1 Problem Statement

Current Situation

Click Computer and Accessories provides computer and electronic support services to clients. Clients may experience different technical problems with devices such as cellphones, laptops, printers, televisions and other electronic equipment.

Currently, requesting technical assistance may require clients to communicate directly with staff and explain their device and problem manually. This can make the support process less structured and may make it difficult to track requests and their progress.

Specific Problem

The main problem is the lack of a simple, centralised platform through which clients can quickly select their device, identify the problem or service required, submit a support request and track its progress.

People Affected

The people affected include:

- Clients requesting computer and electronic support.
- Support operators responsible for monitoring requests.
- Technicians responsible for repairing or resolving technical problems.
- Administrators or managers responsible for overseeing the service operation.

Consequences

The current process may result in:

- Delays in receiving support.
- Difficulty communicating technical problems clearly.
- Requests being missed or forgotten.
- Difficulty assigning requests to appropriate technicians.
- Limited visibility of request progress.
- Increased workload for support staff.

- Poor communication between clients, support operators and technicians.

Need for Improvement

There is a need for a simple and easy-to-use support platform that allows clients to submit requests with minimal steps while allowing staff to monitor, communicate, assign and manage support requests effectively.

The proposed platform should ensure that support requests are properly recorded, assigned and tracked from submission through completion.

1.2 Purpose

The purpose of the proposed Click Computer and Accessories platform is to provide clients with a simple way to request computer and electronic support.

The platform is intended to improve the current support process by allowing clients to:

- Register and log in.
- Select their device.
- Select the relevant problem or service.
- Describe the problem.
- Attach supporting evidence when necessary.
- Submit a support request.
- Communicate with support staff.
- Track the status of their request.

The platform will also allow support operators, technicians and administrators to manage requests efficiently.

A key purpose of the prototype is to avoid unnecessary complexity. The main client actions should be immediately visible so that a client can request assistance with minimal navigation.

1.3 Scope

Included

Project Aim

The aim of the project is to develop a simple client-support platform for Click Computer and Accessories that enables clients to submit, communicate about and track computer and electronic support requests.

Project Objectives

The system objectives are to:

1. Provide a simple and user-friendly client application.

2. Allow clients to register and log in.
3. Allow clients to select a supported device.
4. Allow clients to select a relevant problem or service.
5. Allow clients to describe their technical problem.
6. Allow clients to attach supporting screenshots, photographs or documents.
7. Allow clients to submit support requests.
8. Allow clients to track the status of their requests.
9. Allow support operators to monitor incoming requests 24/7.
10. Allow support operators to communicate with clients.
11. Allow requests to be assigned to technicians.
12. Allow administrators to manage users and support requests.
13. Provide notifications for important request events.
14. Allow relevant device or asset information to be recorded.

Deliverables

The project will deliver:

- Client-facing application.
- Support-request submission functionality.
- Device selection menu.
- Problem/service selection.
- Request-status tracking.
- Client/support communication functionality.
- Technician assignment functionality.
- Administrator controls.
- Notification functionality.
- Device/asset information functionality.
- Supporting evidence upload functionality.
- Backend and database.
- System Requirements Specification.
- System architecture diagrams.
- Testing and acceptance evidence.

Acceptance Criteria

The system will be accepted when:

- A client can register and log in.
- A client can select a supported device.
- A client can select a relevant problem or repair service.
- A client can provide a short description of the problem.
- A client can optionally attach supporting evidence.
- A client can successfully submit a support request.
- A submitted request receives an appropriate status.
- A support operator can view incoming requests.
- A support operator can communicate with clients.
- A support request can be assigned to a technician.
- An administrator can monitor and manage requests.
- Clients receive relevant notifications.
- Clients can track request status.

Exclusions

The initial prototype will not include:

- Unapproved device categories.
- Complex financial/accounting functions.
- Advanced artificial intelligence diagnosis.
- Automated physical repair of devices.
- Unauthorised access to client devices.
- Features outside the agreed stakeholder requirements unless approved through change control.

Constraints

- **Technical:** The system must use Flutter/Dart and C#.
- **Backend:** ASP.NET Core 6.0.
- **Database:** Supabase.
- **Time:** 4-week development cycle.
- **Budget:** \$0 using free APIs and development tools only.
- The prototype is limited by the available development time and resources.

Assumptions

- Clients have access to a compatible device and internet connection.
- Clients will provide accurate information about their devices and problems.
- Support operators will be available to monitor requests.
- Technicians will have access to requests assigned to them.
- Administrators will have appropriate permissions.
- Clients will provide supporting evidence where necessary.
- The stakeholder-approved requirements will remain the main basis for system development.

1.4 Definitions

Term	Meaning
UAT	User Acceptance Testing
FR	Functional Requirement
NFR	Non-functional Requirement
SR	System Requirement
IR	Integration Requirement
SRS	System Requirements Specification
Client	A person who uses the platform to request technical support
Support Operator	A designated staff member who monitors and manages incoming support requests
Technician	A person responsible for handling or repairing an assigned technical problem

Term	Meaning
Administrator	An authorised user who manages users, requests, assignments and service operations
Support Request	A request submitted by a client for technical assistance
Asset	A device or electronic equipment recorded for support or repair purposes

2. Overall Description

2.1 Product Perspective

The Click Computer and Accessories platform will provide a centralised system for managing client support requests.

The main client journey will be:

Open App

Select Device

Select Problem / Repair

Submit Request

Get Help / Track Status

The system will connect the client application to a backend and database where support requests, users, device information, assignments and statuses can be managed.

System Flow

Client

Flutter/Dart Application

↓

ASP.NET Core 6.0 Backend/API

↓

Supabase Database

↓

Support Operator / Technician / Administrator

The design principle is that the client should not have to navigate through complicated menus. The most common actions should be immediately visible on the main screen.

2.2 User Characteristics

Primary Users

The primary users are:

- **Clients** — submit and track support requests.
- **Support Operators** — monitor incoming requests and communicate with clients.
- **Technicians** — handle assigned technical problems.
- **Administrators/Managers** — oversee the platform and manage users, requests and assignments.

Tech Proficiency

- Clients are expected to have basic smartphone or computer skills.
- Support operators should have basic to intermediate computer skills.
- Technicians should have appropriate technical knowledge for the repairs or support services they handle.
- Administrators should have sufficient skills to manage users and platform operations.

Special Needs

The client-facing application should:

- Use simple and clear navigation.
 - Avoid unnecessary menus.
 - Display common actions immediately.
 - Use understandable language.
 - Provide clear status information.
 - Provide clear confirmation and error messages.
 - Allow supporting evidence to be attached when required.
-

2.3 Constraints

Technical

The platform must use:

- Flutter/Dart for the frontend.
- C# and ASP.NET Core 6.0 for the backend.
- Supabase for the database.

Time

The project has a **4-week development cycle**.

Budget

The project has a **\$0 budget** and must use free APIs, tools and services.

3. System Requirements

Requirements shall be prioritised as:

- **Must Have:** Essential to the operation of the platform.
- **Should Have:** Important functionality that should be implemented where possible.
- **Could Have:** Desirable functionality that can be implemented if time allows.

3.1 Functional Requirements

Functional requirements describe **what the system must do**.

3.2 Non-functional Requirements

Non-functional requirements describe the quality, condition or rules that the system must satisfy.

3.3 System Requirements

System requirements identify the technologies and operating environment required by the system.

3.4 Integration Requirements

Integration requirements describe how the client application, backend and database must communicate and work together.

Requirements Table

ID	Requirement	Type	Priority	Related Stakeholder Need
FR1	The system shall provide a simple client-facing application that allows clients to access common support functions with minimal navigation.	Functional	Must Have	REQ-01 Simple Client Application
FR2	The system shall allow clients to register and log in.	Functional	Must Have	REQ-02 Client Registration / Login
FR3	The system shall provide a device menu containing approved devices such as Cellphone, Laptop, Printer, TV and Other Equipment.	Functional	Must Have	REQ-03 Device Menu
FR4	The system shall display relevant repair and support options after a client selects a device.	Functional	Must Have	REQ-04 Problem / Service Selection
FR5	When Laptop is selected, the system shall provide options including Screen Repair, Battery Repair, Motherboard Repair and Software/OS Support.	Functional	Must Have	REQ-05 Laptop Example
FR6	The system shall allow clients to select a problem, provide a short description and submit a support request.	Functional	Must Have	REQ-06 Simple Request Submission
FR7	The system shall allow clients to view whether their request is received, assigned, in progress, completed or otherwise updated.	Functional	Must Have	REQ-07 Request Status
FR8	The system shall allow an authorised support operator to monitor incoming client requests and manage active support requests.	Functional	Must Have	REQ-08 24/7 Active Client Management
FR9	The system shall provide a communication mechanism between clients and support operators regarding support requests.	Functional	Must Have	REQ-09 Client Communication
FR10	The system shall allow support requests to be assigned to appropriate technicians.	Functional	Must Have	REQ-10 Technician Management
FR11	The system shall allow authorised administrators to monitor requests, manage users, assign work and oversee service operations.	Functional	Must Have	REQ-11 Administrator / Manager Controls

ID	Requirement	Type	Priority	Related Stakeholder Need
FR12	The system shall send notifications to relevant users when important request events occur, including new requests, assignments and status changes.	Functional	Should Have	REQ-12 Notifications
FR13	The system shall allow relevant device or asset information to be recorded for support and repair management.	Functional	Should Have	REQ-13 Asset / Device Information
FR14	The system shall allow clients and staff to attach relevant screenshots, photographs or documents to a support request.	Functional	Should Have	REQ-14 Supporting Evidence
NFR1	The client application shall be simple, clear and easy to understand.	Non-functional	Must Have	REQ-01 Simple Client Application
NFR2	The system shall protect client, technician and administrator information from unauthorised access.	Non-functional	Must Have	REQ-02 Client Registration / Login
NFR3	The system shall provide clear confirmation, status and error messages to users.	Non-functional	Must Have	REQ-07 Request Status
NFR4	The system shall maintain accurate and consistent support-request information.	Non-functional	Must Have	REQ-08 / REQ-11
NFR5	The system shall be designed to support continuous request monitoring by designated support staff.	Non-functional	Must Have	REQ-08 24/7 Active Client Management
NFR6	The system shall provide an understandable interface requiring minimal steps for submitting a request.	Non-functional	Must Have	REQ-06 Simple Request Submission
SR1	The frontend application shall be developed using Flutter and Dart.	System	Must Have	Technical constraint
SR2	The backend shall be developed using ASP.NET Core 6.0 and C#.	System	Must Have	Technical constraint
SR3	The system shall use Supabase for persistent data storage.	System	Must Have	Database requirement
SR4	The system shall require an internet connection for communication with the backend and database.	System	Must Have	Platform operation

ID	Requirement	Type	Priority	Related Stakeholder Need
IR1	The Flutter client application shall communicate with the ASP.NET Core backend through APIs.	Integration	Must Have	Client request processing
IR2	The ASP.NET Core backend shall communicate with Supabase to store and retrieve users, requests, device information and other relevant data.	Integration	Must Have	Data management
IR3	Support-request information submitted by clients shall be transferred from the frontend through the backend and stored in the database.	Integration	Must Have	REQ-06 Request Submission
IR4	Request-status changes made by authorised staff shall be reflected in the client application.	Integration	Must Have	REQ-07 Request Status
IR5	Communication and notification events shall be connected to the relevant support request and users.	Integration	Should Have	REQ-09 / REQ-12

3.5 Requirement Acceptance Criteria

The following acceptance criteria will be used to determine whether the major requirements have been successfully implemented.

Requirement	Acceptance Criteria
REQ-01	A client can access the main support functions without navigating through complicated menus.
REQ-02	A client can successfully register and log in using valid credentials.
REQ-03	The device menu displays approved categories such as Cellphone, Laptop, Printer, TV and Other Equipment.
REQ-04	Selecting a device displays relevant support and repair options.
REQ-05	Selecting Laptop displays Screen Repair, Battery Repair, Motherboard Repair and Software/OS Support.
REQ-06	A client can select a problem, enter a description and submit the request successfully.
REQ-07	A client can view the current status of a submitted request.
REQ-08	A support operator can view and monitor incoming requests.

Requirement	Acceptance Criteria
REQ-09	A client and support operator can communicate regarding a support request.
REQ-10	An authorised user can assign a support request to a technician.
REQ-11	An administrator can manage users, requests and assignments.
REQ-12	Relevant users receive notifications for important request events.
REQ-13	Device or asset information can be recorded against a support request where required.
REQ-14	A client can attach a relevant screenshot, photograph or document to a request.

3.6 Simple Client User Journey

The stakeholder requires the client journey to remain simple.

Step 1 — Open App

The client opens the Click Computer and Accessories application.

Step 2 — Select Device

The client selects the device requiring assistance.

Examples:

- Cellphone
- Laptop
- Printer
- TV
- Other Equipment

Step 3 — Select Problem / Repair

The client selects the relevant problem or service.

For example, selecting **Laptop** may display:

- Screen Repair
- Battery Repair
- Motherboard Repair
- Keyboard
- Software/OS Support

Step 4 — Submit Request

The client:

- Selects the problem.
- Adds a short description.
- Optionally attaches supporting evidence.
- Submits the support request.

Step 5 — Get Help / Track Status

The client receives assistance and can track the request through statuses such as:

Received → Assigned → In Progress → Completed

3.7 Device and Repair Structure

Device	Support Type	Examples
Cellphone	Hardware / Software	Screen, Battery, Charging Port, Motherboard, Software/ OS
Laptop	Hardware / Software	Screen, Battery, Motherboard, Keyboard, Software/OS
Printer	Hardware / Software	Paper Feed, Cartridge/Ink, Print Head, Power, Driver/ Software
TV	Hardware / Software	Screen, Power Supply, Main Board, Remote/Controls, Software
Other Equipment	Hardware / Software	Options defined according to approved equipment categories

3.8 24/7 Client Management Requirement

The platform shall support an active person on a 24/7 basis to monitor and manage client requests.

The designated support operator shall:

- Monitor incoming client requests.
- Respond to clients.
- Acknowledge new requests.
- Provide first-level assistance where possible.
- Assign technical work to the appropriate technician.
- Escalate technical problems where necessary.
- Monitor outstanding and urgent requests.
- Keep clients informed about progress.

- Update clients when the request status changes.

The purpose of this requirement is to ensure that client requests are not left unattended.

4. System Architecture

4.1 Component Diagram

The proposed architecture consists of the following major components:

Client

Flutter/Dart Client Application

ASP.NET Core 6.0 Backend/API

Supabase Database

Support Operator / Technician / Administrator

Main System Components

1. **Client Application**
2. Registration/login
3. Device selection
4. Problem/service selection
5. Request submission
6. Supporting evidence
7. Request status
8. Client communication
9. **Backend**
10. Authentication
11. Request processing
12. Request assignment

13. Status management
 14. User management
 15. Communication
 16. Notifications
 17. **Database**
 18. Client information
 19. Device information
 20. Support requests
 21. Request status
 22. Technician information
 23. Assignments
 24. Supporting evidence
 25. Communication records
-

Use Cases

Client Use Cases

- Register.
- Log in.
- Select device.
- Select problem/service.
- Describe problem.
- Attach evidence.
- Submit support request.
- Communicate with support.
- View request status.

Support Operator Use Cases

- Log in.
- Monitor incoming requests.
- View request details.
- Communicate with clients.
- Provide first-level assistance.
- Assign requests.
- Escalate requests.
- Update request status.
- Monitor urgent/outstanding requests.

Technician Use Cases

- Log in.
- View assigned requests.
- View device/problem information.
- View supporting evidence.

- Update repair progress.
- Update request status.

Administrator Use Cases

- Manage users.
 - Monitor requests.
 - Assign work.
 - Manage technicians.
 - Oversee service operations.
 - Monitor system activity.
-

Class Diagram

The main system classes/entities may include:

- **Client**
 - **User**
 - **Device**
 - **DeviceType**
 - **SupportRequest**
 - **Problem**
 - **Service**
 - **Technician**
 - **Assignment**
 - **Message**
 - **Notification**
 - **Attachment**
 - **Administrator**
 - **SupportOperator**
-

4.2 Technologies

Layer	Technology
Frontend	Flutter (Dart)
Backend	ASP.NET Core 6.0 (C#)
Database	Supabase

5. Appendices

5.1 Stakeholder Evidence

Detailed evidence supporting the requirements should be included in the appendices of the initial SRS.

Appendix	Evidence
Appendix A	Stakeholder interview questions
Appendix B	Stakeholder responses or meeting notes
Appendix C	Evidence of stakeholder engagement
Appendix D	Stakeholder confirmation of the findings
Appendix E	Additional current-process evidence

The stakeholder requirements document should be included as supporting evidence because it contains the agreed requirements, client journey, device/support structure, 24/7 management requirement and scope/change-control information.

5.2 Risk and Mitigation

Risk	Mitigation
Complex client interface	Keep the main client journey simple and make common actions immediately visible.
Support requests being missed	Provide active request monitoring and notifications for important events.
Incorrect technician assignment	Allow authorised staff to assign requests according to device and technical problem.
Poor communication	Provide communication between clients and support operators through the platform.
Incomplete technical information	Allow clients and staff to attach screenshots, photographs and documents.
Incorrect request status	Restrict status changes to authorised users and maintain clear status values.
System integration failure	Test frontend, backend and database communication throughout development.
Limited development time	Prioritise Must Have requirements before Should Have and Could Have requirements.
Limited budget	Use free APIs, development tools and services.
24/7 support availability	The business must designate an active support operator responsible for continuous request monitoring.

6. Stakeholders and User Groups

Stakeholder or User	Role in the Proposed System
External Stakeholder — Click Computer and Accessories	Provides business requirements, confirms the agreed direction and validates the proposed platform.
Client / Mobile Application User	Registers, selects a device and problem, submits support requests, communicates with support and tracks request status.
Support Operator	Monitors incoming requests 24/7, responds to clients, provides first-level assistance, assigns work and escalates technical problems.
Technician	Receives assigned support requests, investigates technical problems, performs repairs/support and updates progress.
Administrator / Manager	Manages users, monitors requests, assigns work and oversees the overall service operation.
Other Affected Users	Staff who depend on accurate request, device and service information to support business operations.

7. Revision History

Version	Date	Changes
1.0	24 August 2026	Initial SRS draft based on stakeholder requirements
1.1	25 August 2026	Requirements updated to reflect stakeholder requirements for client support requests, device/service selection, request tracking, 24/7 support, technician management and administrator controls.
